VSP One SDS v1.18 Expands Cloud Support with GCP and Microsoft Azure
Also Adds Async Bidirectional Replication

VSP One SDS v1.18 Expands Cloud Support with GCP and Microsoft Azure
Also Adds Async Bidirectional Replication

Our latest release of Virtual Storage Platform One SDS (VSP One SDS), available on July 31, 2025, empowers customers with greater flexibility, resilience, and cloud choice. It introduces native Google Cloud Platform (GCP) and Microsoft Azure support, alongside asynchronous bidirectional replication. VSP One SDS v1.18 also delivers simplified deployment and management across hybrid cloud environments.

Key features include:

- **Support for Google Cloud Platform (GCP) and Microsoft Azure.**
    - For streamlined cloud deployments, availability of unified management and integration with cloud-native services.
    - Expands our market share for customers not using AWS as a hyperscaler and creates cloud partnerships with all major hyperscalers, providing a competitive edge via broad public cloud support.

- **Asynchronous Bidirectional Replication.**
    - Enables cost-effective disaster recovery, workload mobility, and consistent data access with minimal RPO.
    - Provides a cost-effective solution for cloud target-based disaster recovery, improves RPO and RTO and simplifies workload migration.

- **A unified platform with VSP One.**
    - Reduces complexity and improves data availability, while enabling seamless integration with existing infrastructure.

- Optimizes resource utilization and the ability to meet SLAs with enhanced control and API-driven automation.
