Wasabi Account Control Manager

Simplify cloud storage account creation, management, and billing across multiple tiers with an end-to-end IaaS solution

Customer Growth and Account Administration Adds Challenges

Managing multiple cloud storage accounts individually can be com- plex and cumbersome. As the number of accounts grow, organizations would like to set up policies and manage billing across these accounts in a simple, manageable way. To ease the management of multiple ac- counts, Wasabi developed the Wasabi Account Control API. It provides a more efficient, automated solution for creating new accounts. Howev- er, customizing the Wasabi Account Control API for your specific needs can consume technical resources and time.

The Solution

The Wasabi Account Control Manager harnesses the power of the Wasabi Account Control API and presents it as an easy-to-use graphical user interface. This solution can be used to accelerate your Wasabi Hot Cloud Storage deployment, standing up a multi-tiered cloud storage ser- vice in less than an hour. This means that your cloud storage users can be up and running faster, with less back-end complexity for you.

As your cloud storage accounts grow, the Wasabi Account Control Manager is here to make account management simple. The hosted management interface allows you to centrally manage all of your Wasabi accounts under management (Channel Accounts & Sub- Accounts) from a single Control Account.

Automate Wasabi Account Creation and Management

The Wasabi Account Control Manager helps you simplify operations by automating the creation and modification of Channel Accounts and Sub-Accounts. Using the Account Control Manager, you can create trial accounts, assign trial quotas, and duration, and convert them to paid accounts when ready. The Wasabi Account Control Manager allows you to create, change, or import sub-accounts into Account Control Manager from the Account Control API.

Insight Into Storage Accounts

Wasabi Account Control Manager provides information that allows you to:

- › Identify and generate reports for active and deleted storage
- › Identify and generate reports for API requests

Key Benefits

- › Increase Service Velocity
  - › Get accounts up and running faster
  - › Speed time to revenue
- › Reduce Administrative Complexity for multi-tier, multi-tenant deployments
  - › Centralized view into tiered accounts
  - › Automate policy management
- › Simplify Billing and Chargeback
  - › View charges incurred by all accounts
  - › Share billing information with account owners in easy to read file formats: CSV, XLS, JSON
- › Customized Branding
  - › Login Screen – Logo and site name
  - › Logo and custom colors
  - › White label URL support
- › Account & Data Security
  - › Single Sign-On (SSO)
  - › Multi-Factor Authentication
  - › Object Lock (immutability)

Wasabi Account Control Manager

› Know how much data is being egressed

› Know the number of stored objects and deleted objects

Account Governance

Wasabi Account Control Manager's Account Governance feature gives you access to a tier above Control Accounts. Governance tier users can manage multiple Control Accounts, and have a wider range of roles and permissions than Control Account users to maximize customizability for your WACM use case.

If you are interested in enabling Account Governance, please send an email to **sales@wasabi.com**.

Channel Accounts

Ideal for OEM's MSPs and Resellers wishing to simplify multi-tiered management Partner can fully onboard and manage their channel seamlessly. With the Channel Accounts feature, Admins can create, manage, delete sub-accounts and access sub-invoices to channel's sub-accounts.

A Simpler Way to Manage a Multi-Tiered Deployment

› As of Q4 2023, Wasabi Account Control Manager supports a three-tier model for account management

› Control Accounts can now provision Channel Accounts (NEW) as well as Sub- Accounts.

› Channel Accounts are fully enabled, fully managed accounts with rollup billing data for all sub accounts.
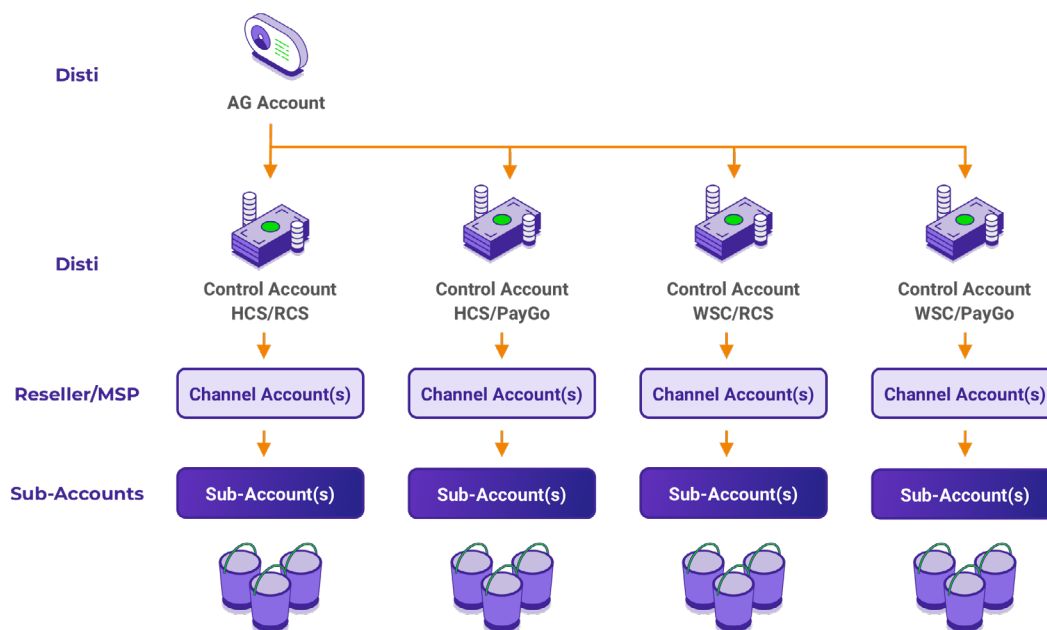

Wasabi Account Control Architecture

White Labeling with Custom Cloud Console

Ideal for MSPs and Resellers Wishing to White Label Wasabi Hot Cloud Storage.

Would you prefer to white-label your Wasabi cloud object storage service? Custom Cloud Console is a unique feature of Wasabi Account Control Manager that enables you to customize the interface with your company's name, logo, and color scheme for a fully branded experience for your end customers.

WACM Connect

WACM Connect is a set of API endpoints that give WACM users another lens into their Wasabi accounts under management. Using a set of RESTful JSON methods, WACM Connect allows users to query against Wasabi account information such as bucket, usage and invoice data and return relevant metrics from within the API platform. WACM Connect streamlines the query process, saving time for users with multiple accounts under management by bypassing the WACM GUI and giving WACM users direct access to relevant data.

At a high level, WACM Connect allows customers to:

› Create API Keys from their user profile

› Query utilization of sub-accounts at the account level and bucket level

› Query and filter invoices of sub-accounts

› Provides WACM AG Customers a new way to access data across Control Accounts

› Easily request utilization for RCS Contracts

For more information including a full list of endpoints, visit the **WACM Connect API guide**.

If you are looking to add a fully branded, multi-tiered storage-as-a-service offering to your portfolio of cloud services, Wasabi is the best place to start. To get started quickly and easily, **contact us today**.
